1. **User Story: Employee Directory**

As an admin, I want to search for employees in the employee directory so that I can view their details.

Acceptance Criteria:

1. **Search Functionality:**
- The admin should be able to search for employees by name, job title, or location.
- The search results should display a list of employees matching the search criteria.
2. The directory page should be accessible from the menu
3. **Employee Details:**
- Clicking on an employee's name in the search results should open a detailed view of the employee's profile.
- The detailed view should include personal information, job details, and contact information.
4. **User Interface:**
- The search bar should be easily accessible on the directory page.
- The search results should be clearly displayed and easy to navigate.
5. **Performance:**
- The search functionality should return results within 2 seconds.
- The system should handle multiple concurrent searches without performance degradation.

Test Cases:

1. **Scenario: Search for an employee by name**

Given the admin is logged in and on the employee directory page

When the admin enters an employee's name in the search bar

And clicks the "Search" button

Then the system should display the matching employee's details

2. **Scenario: Search for employees by department**

Given the admin is logged in and on the employee directory page

When the admin selects a department from the department dropdown

And clicks the "Search" button

Then the system should display employees who belong to that department

3. Scenario: View employee details

Given the admin is on the employee directory page after a successful login

When the admin moves to the Records Found section

Then the admin should be able to see all the employees in a grid format

4. Scenario: No results found for an invalid search

Given the admin is on the employee directory page

When the admin searches for a non-existent employee

Then the system should display a "No results found" message

5. Scenario: Reset search filters

Given the admin is on the employee directory page with active search filters

When the admin clicks the "Reset" button

Then all search fields should be cleared, and the employee directory should refresh to the default view
